

Networking as Key Factor for Success

Mentoring program „Sachsen digital – Mit Frauen in Führung“

The idea

- To develop and implement the digital transformation in a future-oriented manner, it is necessary to have
 - (1) Specialists and managers with a **wide range of competencies** and
 - (2) Substantial **diversity** in your team
- **Innovation in leadership culture** will increasingly become factor of success
- **Women** are still strongly **underrepresented in leadership positions**
 - General employment: gender distribution nearly balanced between men (53.4%) and women (46.6%) (as of 2019)
 - Leadership positions: women (29.4%) significantly underrepresented compared to men (70.6%)

The program

- The program "**Saxony Digital - Women in Leadership**" is designed to specifically support women from STEM professions and career changers who plan to take on a management role with a focus on digital transformation in the near future
- **12 months**
- **Ten trainees & ten mentors** from administration, politics, science, civil society, business and the creative industries → each mentor accompanies one trainee individually for the entire duration of the program
- **Five intensive workshop days**, which are dedicated to classic leadership topics and competencies, but with a focus on the perspective of female managers

The Topics

Self-leadership and leadership

- | Topic is about leading myself and others successfully, and with appreciation → only when I can lead myself I can also lead my employees
- | Thesis: NewWork is a leadership regime for successfully managing digital transformation. Its implementation is the right way to create a more inclusive work environment for female IT professionals and thus a higher percentage of women in the industry.
- | Research: Central pillars, such as teamwork, benevolent cooperation and open communication, however, are only practiced in very few companies in the IT sector.

The Topics

Cooperation and networking

- | Topic is about establishing sustainable cooperative relationships
- | Thesis: Cooperation and networking are also the success factors for successful digitization. Digital collaboration promotes transparency and quality and, thus, also the career path of women.
- | Research:
 - | When filling management positions in family businesses, "personal, sometimes very exclusive networks, in which there are hardly any women, play an important role, as does a traditional recruitment template that is always the same"
 - | → managers tend to recruit people who are "very similar to them"

The Topics

Femininity and professionalism

- | Topic is about finding the individual role
- | Thesis: Women in IT, just like women in general, are exposed to structural discrimination and sexual harassment in their professional lives
- | Research:
 - | 90% have experienced micro-aggressions such as an unfair treatment because of their gender or sexist jokes
 - | 40% of women stated that they had already experienced sexual harassment in the workplace

The Topics

Power, competition and resistance

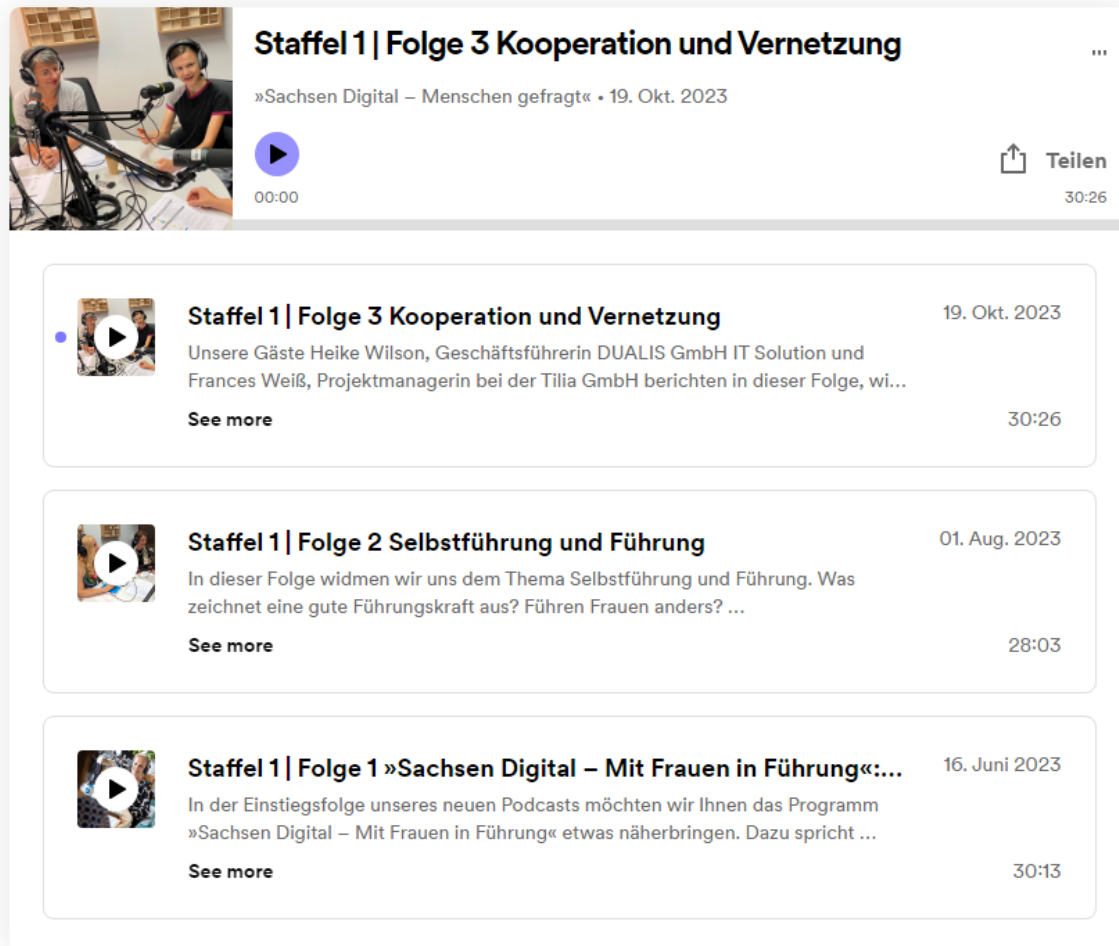

- | Thesis: Power is part of life, but powerlessness is not. Professional life is full of situations of competition, and meetings in particular are predestined for power games.
- | There is a difference between competition and contest.
- | Recognizing power games and developing communication strategies to counter them should be part of every manager's toolkit.
- | Here, too, it is important to analyze the situation objectively and expand your repertoire of options for action.

The Topics

Career decisions

- | Thesis: Many women are overqualified for their jobs, work part-time more often and their income lags behind that of their male colleagues
- | We have to discuss role perceptions and what the social image of a woman means
- | This is where the topics of self-management and leadership miraculously reappear – becoming aware of what you really want. And once the decision for leadership responsibility has been made, to use all the skills described above to successfully take the lead.
